

DETAILS

Innov Pro model mounted sprayers are professional machines, particularly characterized by modern technology and robust construction. This enables the user to spray at higher speeds and to work on large surface areas. These sprayers are fully compliant with strict European environmental and spraying standards. Its structural design ensures a short barycentre distance between the tractor and machine, a well-stirred spraying agent mixture, drainage of the tank and a simple cleaning process.

The lower support legs mounted on the frame enable appropriate positioning and stability of the sprayer when not attached to the tractor. Capacities of 800 and 1000 lt are available. Modern design with rounded edges, smooth interior walls and inclined bottom ensures complete drainage and efficient cleaning.

The tank is made from chemically resistant polyethylene. It features a large lid with a strainer mounted at the top of the tank to facilitate filling operations. The tank includes an engraved litre scale for easier reading of the quantity of the chemical agent. Main tank is equipped with rinsing and hand rinsing tank. Modern sand blasting and powder coating methods provides an effective protection of the frame of our all kind of sprayers.
